

Double Wall Felted Vessel

22nd January 2021

with... **Sam Tannous**

One day workshop

This is a special twist on the classic “resist” method for making a wet felted vessel - and the results are stunning!

The inner wall is solid while the outer wall has piercings, slits or holes that reveal the inner layer. These cuts are perfect for stitch embellishment. Cuts can also be made into the inner layer, for astonishing see-through effects.

Contrasting colours for each layer will create visual appeal. Surface decoration into the felt using silks and exotic fibres, for example, add shine and texture.

Suitable for all levels of experience

All equipment will be supplied - including foam templates, and wet felting equipment (bubble wrap, olive oil soap, ball browsers, etc), as part of the course.

Wool and silk fibres will be available for purchase on the day. Weigh and pay for what you use.

Participants should bring a couple of old towels, a plastic bag to take home wet project, and apron, and closed shoes.
